PROFESSIONAL SUMMARY

Fresh Computer Science graduate with hands-on expertise in building Agentic AI systems, autonomous workflows, and full-stack web applications. Proficient in LLM orchestration using OpenAI and Anthropic APIs, multi-agent frameworks, RAG pipelines, and MCP server development. Passionate about designing AI agents that reason, plan, and act autonomously to solve real-world problems. Eager to contribute cutting-edge agentic AI solutions in a dynamic, research-driven environment.

CORE TECHNICAL SKILLS

AI / Agentic Systems

Agentic AI	LLM Orchestration	OpenAI API	Anthropic Claude
LangChain	LangGraph	RAG Pipelines	Vector Databases
MCP Servers	Prompt Engineering	Function Calling	Multi-Agent Systems
AI Workflow Automation	Streamlit	FastAPI	Hugging Face

Web Development

Python	Django	Flask	JavaScript
React.js	Node.js	HTML/CSS	SQL
MongoDB	REST APIs	Git / GitHub	Docker

PROJECTS

NexaJobs — AI Job Recommendation System

Django · scikit-learn · TF-IDF · Cosine Similarity · SQLite · Gmail SMTP

- Built a full-stack Django web app with ML-powered job recommendations using TF-IDF vectorization and cosine similarity.
- Designed a complete recruiter dashboard: post/edit/delete jobs, review applications, accept/reject applicants with automated email notifications.
- Implemented a real-time messaging system between recruiters and applicants with email alerts via Gmail SMTP.
- Integrated JWT authentication, role-based access control (job seeker vs recruiter), and REST API endpoints.

AI Job Recommender — Agentic Resume Analyzer

Python · Streamlit · OpenAI API · Apify · MCP Server · pdfplumber

- Developed an agentic AI tool that autonomously extracts text from uploaded PDF resumes using pdfplumber.
- Integrated OpenAI GPT to generate resume summaries, identify skill gaps, and produce personalized career roadmaps.
- Built an MCP server exposing LinkedIn and Naukri job-fetching tools for agent-driven job discovery via Apify API.
- Designed multi-step agentic workflow: parse resume → analyze gaps → recommend jobs → fetch live listings.

Job Portal — Full Stack Web Application

MongoDB · Express · React.js · Node.js · JWT · Multer

- Built a MERN stack job portal enabling recruiters to post jobs and applicants to apply with resume uploads.
- Implemented JWT-based authentication with persistent sessions and role-based access for recruiters and applicants.
- Developed RESTful APIs for job CRUD operations, application management, and file handling with Multer.

Todo List Application

HTML · CSS · JavaScript · LocalStorage

- Created a responsive task management app with add, edit, delete, and mark-complete functionality.
- Implemented localStorage persistence to save tasks across browser sessions without a backend.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Graduating 2026

Lahore, Pakistan

- Relevant coursework: Artificial Intelligence, Machine Learning, Data Structures, Database Systems, Software Engineering

CERTIFICATIONS & LEARNING

- OpenAI API & GPT-4 Integration — self-directed projects with function calling and assistants API
- Agentic AI Workflows — LangChain, LangGraph, multi-agent orchestration and tool use
- MCP (Model Context Protocol) Server Development — FastMCP, tool exposure for AI agents
- RAG Pipeline Design — vector embeddings, semantic search, retrieval-augmented generation
- Django REST Framework & JWT — backend API development and authentication

STRENGTHS

Agentic Systems Design	LLM Prompt Engineering	Multi-Agent Orchestration	RAG Pipeline Development
Problem Solving	Quick Learner	Clean Code Practices	Team Collaboration

LANGUAGES

Urdu — Native | English — Proficient
